CLAIM AMENDMENTS:

Claims 1-7 (cancelled).

8. (Currently amended) A method of forming a multilayer antireflective hard mask structure, said method comprising:

providing a substrate structure;

depositing a CVD organic layer over said substrate structure by a plasma enhanced chemical vapor deposition process using a feed stream that comprises a hydrocarbon species, said CVD organic layer comprising carbon and hydrogen;

depositing a dielectric layer over said CVD organic layer;

providing a patterned organic photoresist layer over said dielectric layer;

etching said dielectric layer through apertures in said patterned photoresist layer in a first plasma etching step until apertures are formed in said dielectric layer; and

etching said CVD organic layer through said apertures in said dielectric layer in a second plasma etching step until apertures are formed in said CVD organic layer.

- 9. (Original) The method of claim 8, wherein said dielectric layer is a silicon oxynitride layer.
- 10. (Original) The method of claim 9, wherein said first plasma etching step is conducted using a plasma source gas that comprises a halogen containing species.
- 11. (Original) The method of claim 10, wherein said first plasma etching step is conducted using a plasma source gas that comprises a fluorocarbon containing species.
- 12. (Cancelled)
- 13. (Currently amended) The method of <u>elaim 12 claim 1</u>, wherein said hydrocarbon species is propylene gas.

- 14. (Currently amended) The method of-claim 12 claim 1, wherein said feed stream further comprises N₂ gas.
- 15. (Original) The method of claim 8, wherein said second plasma etching step is conducted using a plasma source gas that comprises an oxygen containing species.
- 16. (Original) The method of claim 15, wherein said oxygen containing species is O₂.
- 17. (Currently amended) A method of etching a substrate structure comprising: providing a substrate structure;

providing a patterned multilayer mask structure over said substrate structure, said patterned multilayer mask structure having apertures and comprising: (a) a CVD organic layer comprising carbon and hydrogen deposited over said substrate structure by a plasma enhanced chemical vapor deposition process using a feed stream that comprises a hydrocarbon species and (b) a dielectric layer over said CVD organic layer; and

etching said substrate structure through said apertures by a plasma etching process.

- 18. (Original) The method of claim 17, further comprising removing remnants of said CVD organic layer after said substrate structure is etched.
- 19. (Original) The method of claim 18, wherein said remnants are removed by a plasma etching process in the presence of a plasma source gas that comprises an oxygen containing species.
- 20. (Original) The method of claim 19, wherein said oxygen containing species is O₂.
- 21. (Original) The method of claim 17, wherein said substrate structure comprises a silicon layer and wherein said silicon layer is etched in the course of said plasma etching process.

- 22. (Original) The method of claim 21, wherein said plasma etching process comprises a plasma etching step that utilizes a plasma source gas composition comprising a halogen containing species.
- 23. (Original) The method of claim 21,

wherein said substrate structure comprises a single crystal silicon layer, an oxide layer over said single crystal silicon layer, a doped polycrystalline silicon layer over said oxide layer and a native oxide layer over said doped polycrystalline silicon layer, and

wherein said native oxide layer and said doped polycrystalline silicon layer are etched by said plasma etching process.

- 24. (Original) The method of claim 23, wherein said plasma etching process comprises two or more plasma etching steps and wherein each of the two or more plasma etching steps utilizes a plasma source gas composition that comprises a halogen containing species.
- 25. (Original) The method of claim 21,

wherein said substrate structure comprises a single crystal silicon layer, an oxide layer over said single crystal silicon layer and a silicon nitride layer over said oxide layer, and

wherein said single crystal silicon layer, said oxide layer, and said silicon nitride layer are etched by said plasma etching process.

- 26. (Previously presented) The method of claim 25, wherein said plasma etching process comprises (a) one or more plasma etching steps that utilize a plasma source gas composition comprising an oxygen containing species and (b) one or more plasma etching steps that utilize a plasma source gas composition comprising a halogen containing species.
- 27. (Currently amended) A method of etching a substrate structure comprising: providing a substrate structure;

providing a CVD organic layer comprising carbon and hydrogen over said substrate structure by a plasma enhanced chemical vapor deposition process using a feed stream that comprises a hydrocarbon species, said CVD organic layer having apertures therein; and

etching said substrate structure through said apertures by a plasma etching process.

- 28. (Original) The method of claim 27, further comprising removing remnants of said CVD organic layer after said substrate structure is etched by a plasma etching process in the presence of a plasma source gas that comprises an oxygen containing species.
- 29. (Original) The method of claim 28, wherein said oxygen containing species is O₂.
- 30. (Currently amended) A method for trimming a mask feature comprising:

providing one or more mask features on a substrate structure, each said mask feature comprising (a) a CVD organic layer comprising carbon and hydrogen deposited on said substrate structure by a plasma enhanced chemical vapor deposition process using a feed stream that comprises a hydrocarbon species, and (b) a dielectric layer disposed over said CVD organic layer such that sidewall portions of said CVD organic layer are exposed; and

etching said exposed sidewall portions of said CVD organic layer by means of a plasma etching process such that the width of said one or more mask features is reduced at said substrate.

- 31. (Original) The method of claim 30, wherein said dielectric layer is a silicon oxynitride layer.
- 32. (Original) The method of claim 30, wherein said CVD organic layer comprises 70-80 % carbon, 10-20% hydrogen and 5-15% nitrogen.
- 33. (Original) The method of claim 30, wherein said CVD organic layer is etched using a plasma source gas that comprises an oxygen containing species.
- 34. (Original) The method of claim 33, wherein said oxygen containing species is O₂.
- 35. (Previously presented) The method of claim 8, wherein said CVD organic layer comprises 70-80 % carbon, 10-20% hydrogen and 5-15% nitrogen.

- 36. (Previously presented) The method of claim 8, wherein said dielectric layer is a silicon oxynitride layer and wherein said CVD organic layer comprises 70-80% carbon, 10-20% hydrogen and 5-15% nitrogen.
- 37. (Previously presented) The method of claim 17, wherein said CVD organic layer comprises 70-80 % carbon, 10-20% hydrogen and 5-15% nitrogen.
- 38. (Previously presented) The method of claim 17, wherein said dielectric layer is a silicon oxynitride layer and wherein said CVD organic layer comprises 70-80% carbon, 10-20% hydrogen and 5-15% nitrogen.
- 39. (Previously presented) The method of claim 27, wherein said CVD organic layer comprises 70-80 % carbon, 10-20% hydrogen and 5-15% nitrogen.
- 40. (Previously presented) The method of claim 30, wherein said dielectric layer is a silicon oxynitride layer and wherein said CVD organic layer comprises 70-80% carbon, 10-20% hydrogen and 5-15% nitrogen.
